

Application for the Position Risk Analyst at Norsk Hydro ASA.

Hi, my name is Filmon. Within the next two months I will be completing my master's degree in Mathematics for Applications at the University of Oslo. My thesis focuses on developing numerical methods for solving partial differential equations (PDEs), applied to traffic simulation.

The work involves extensive numerical analysis and a significant amount of programming in Python. I have to be systematic when understanding the complex model and designing numerical algorithms. I also make sure to write structured code and document results clearly so they are easy for others to understand. This experience has given me solid skills in data analysis, model development, and programming. I am therefore motivated to join your team as Risk Analyst. I believe this role will offer me the opportunity to learn and grow.

I am applying for this position because I want to keep my skills in mathematics and programming up to date with new technology. In addition, I have a strong desire to expand my network. I believe that this role will give me valuable experience and a strong foundation for further development.

I have strong programming skills. I can program in Python, and I am comfortable using GitHub. I enjoy collaborating on project based work. You can find the implementation of my master project at the following GitHub link: <https://github.com/Filmon492/MAT5960>

With my background in mathematics and programming, I believe I will adapt quickly and contribute effectively to your team. I enjoy challenging others by asking good questions, and I am always interested in exploring new methods. I want to fully understand why one method works better than another. I look forward to the opportunity to work with you.

Kind regards,
Filmon
